

VÖLKL® Overboot « Double Zip »

The innovative VÖLKL® overboot « Double Zip » has originally been developed for successful top sportsmen who submit the product over and over again to different hardness tests. This very convenient overboot can be carried with city shoes, outdoor shoes, special footwear or sports shoes up to cross-country skiing shoes and protects reliably against cold temperatures, wet, wind and dirt. Under extreme weather conditions the overboot can be raised by a gainer on approx. 50 cm, the gainer can be adapted perfectly to the leg through an elastic band. The patented opening system VÖLKL® « Double Zip » provides for comfortable and easy entry. The whole overboot is impregnated against water and dirt and is easily washable.

Use: The VÖLKL® overboot « Double Zip » has been developed in order to protect all types of footwear against cold temperatures, wet, wind and dirt.

Functionality: The more the difference between the temperature inside of the boot and the temperature outside of the boot is, the more the thermal exchange is important. This causes a loss of heat which leads to cold feet. The VÖLKL® overboot « Double Zip » is an additional cover around the shoe which avoids or reduces strongly the fall of temperature and is therefore very isolating.

Protection: The upper part of the VÖLKL® overboot « Double Zip » is made of water repellant and breathable textile (Cordura®). Both zip fasteners are protected against humidity by a water repellant textile. The Mesh lining increases the insulation properties. A gaiter can be unfolded to augment the surface of protection, the gaiter can be fixed to the leg by an adjustable elastic and prevents the penetration of snow. The rubber/PU sole is directly injected on the textile upper.

Thanks to its special profile and to the use of a specific winter rubber compound, the sole protects against sliding on snow and ice. The PU midsole is an additional insulator on frozen ground.

Handling: Both zippers are interconnected and can be opened quickly which only one hand. The « Double Zip » system allows a broad opening up to the top of the feet and makes the entrance and the climbing out very easy and comfortable. An adaptable strap in the ankle area allows fixing the overboot on the footwear in an optimum way. According to the used type of footwear, the volume inside the VÖLKL® overboot « Double Zip » can be reduced thanks to additional intermediate soles of 6 and 9 mm thickness. The overboot can be carried with sports shoes, outdoor shoes or shoes for professional use. It is washable if necessary.

Hygiene: The VÖLKL® overboot « Double Zip » is carried exclusively with shoes. There is no body contact between the feet and the overboot, so that it can be used by several users.

Sizes: The VÖLKL® overboot « Double Zip » is 35 cm high. With unfolded gaiter, its height comes to 50 cm. It is available in 5 different sizes. The equivalences of sizes below are given for information only, the volume and the length of footwear carried in the overboot can strongly differentiate depending on the manufacturer.
